

Mondo Community Coin

Information about general risks

General remark

Before purchasing Mondo Community Coins, prospective buyers should read the following risk information carefully and take these factors into account when making a purchase decision. If necessary, commercial interests should seek professional, independent advice. The following risks may turn out to be incomplete and do not claim to be complete with regard to risks in connection with the acquisition, possession or use of the Mondo Community Coin, CBNS CRYPTO BUY AND SELL DMCC (hereinafter "CBNS") or the upcoming technologies in use. The Mondo Community Coin is a pure voucher token (utility token), which can only be redeemed on the CBNS to receive services on the CBNS's online marketplace <https://mondo.shopping>, and in particular is not a financial instrument or any other type of investment product. The risks presented below can occur individually, but also partially or all together and trigger, influence or intensify one another.

Risks related to the technology used

Ethereum Blockchain

Since Mondo Community Coins are issued on the Public Ethereum Blockchain, any technical difficulty, malfunction or even collapse of the Public Ethereum Blockchain can make it difficult or impossible to issue the coins to customers or to transfer them to the CBNS or a third party and thereby make Mondo Making community coins functionless or worthless.

Blockchain technology and all related technological components are still at an early stage of technical development. It can also contain errors and risks which are still unknown at the time this risk information was created and which could result in unforeseeable consequences in the future. In the worst case, the Mondo Community Coins may be lost and all claims to voucher services against the CBNS may be lost.

The blockchain technology, the Ethereum network and the wallet of the buyer can be exposed to attacks by unauthorized third parties (called hacking). Due to the fundamental anonymity of blockchain technology, prosecuting perpetrators should be almost impossible. Such attacks can lead to the loss of Mondo Community Coins.

Wallet and private key

The loss or theft of access IDs or usernames for the software or hardware used or the loss of the private key in the case of personal safekeeping can mean that the purchaser can no longer dispose of the purchased tokens in his personal electronic wallet that are lost to him. Third parties who gain access to the purchaser's private key could access the Mondo Community Coins stored there by accessing the purchaser's wallet. The CBNS cannot be liable for the loss of the private key. In the case of personal safekeeping of the private key, the purchaser should therefore keep it safe from unauthorized access by third parties. A wallet specified by the purchaser to receive the Mondo Community Coins must also be compatible for Ethereum assets if he wants to effectively receive Mondo Community Coins or later transfer them for redemption. The transfer of tokens to an Ethereum-incompatible wallet can lead to the loss of acquired Mondo Community Coins. In addition, the transferred Mondo Community Coins can be lost if, for example, an incorrect address is given for the wallet to which the coins are to be transferred.

Online platform <https://mondo.shopping>

The CBNS services, which are exclusively available digitally on the CBNS online marketplace (<https://mondo.shopping>) against redemption of the Mondo Community Coins (voucher tokens), are subject to the availability of this online marketplace. The availability of the online marketplace may be due to technical reasons (f.e. system or programming errors of the online platform, hacking attack, technical overload, manipulation by third parties) or legal reasons (f.e. prohibition of operation, f.e. due to the lack of necessary permits or failure to meet legal requirements) or other reasons (f.e. insufficient staff to operate and implement) be disrupted or completely suspended, so that a token holder cannot redeem their Mondo Community Coins on the online marketplace temporarily or permanently.

Processed personal data

It is also possible that personal data of the purchaser of Mondo Community Coins, which were processed as part of the registration on the online marketplace at <https://mondo.shopping>, are stolen and misused by the users for illegal purposes.

Risks related to the CBNS

Funding

The income from the sale of Mondo Community Coins represents an essential source of income within the framework of the entrepreneurial planning for the establishment and expansion of the online marketplace <https://mondo.shopping> of the CBNS. If the CBNS fails to acquire sufficient capital by selling Mondo Community Coins, it could be that the CBNS must discontinue its online marketplace in whole or in part or even must file for bankruptcy. If the financial resources resulting from the existing operational business for the operation as well as the establishment and the expansion of the online marketplace is not sufficient and other financial sources cannot be tapped into in order to continue to successfully run the operation and the planned development and expansion of the online marketplace. The realization of this risk could lead to the limited availability of services against redemption of Mondo Community Coins up to the complete worthlessness of acquired Mondo Community Coins.

Business idea

The online marketplace <https://mondo.shopping> is still a young online marketplace. The CBNS is convinced of the idea behind the Mondo Community Coin and its innovative concept and works on the constant development and further development of its online marketplace and the services offered. In this respect, the white paper on the Mondo Community Coin merely represents the basic idea that the CBNS is striving for with the online marketplace <https://mondo.shopping>, the issue and use of Mondo Community Coins and a Mondo Community, without obligation. However, the CBNS cannot rule out the possibility that the realisation and further development as well as the implementation of its basic idea may be delayed or not implemented according to plan due to various obstacles (e.g. technical, legal, regulatory or excessive competition) or the interest of shop operators and private customers to make use of the online marketplace and to become part of the Mondo community in a limited manner or not at all or that shop

operators and private customers withdraw from the online marketplace, and the success of the operational business and ultimately the implementation of the within the White Paper inherent idea does not occur, so that the CBNS can only operate its online marketplace to a limited extent or not at all. The realization of this risk could lead to the limited availability of services against redemption of Mondo Community Coins up to the complete worthlessness of acquired Mondo Community Coins.

Risks Associated with Mondo Community Coins

Regulation

The CBNS assumes that the sale of the Mondo Community Coins and the redemption for the receipt of services from the CBNS as a pure voucher token (utility token) are currently not subject to any separate regulation in Germany. However, the regulatory and legal framework for blockchain-based tokens, blockchain technologies and smart contracts is still in a strong state of development, both in terms of the adoption of new laws and regulations and in terms of interpretation and application by authorities and courts, since it is still a relatively young regulatory or legal matter. It can therefore not be ruled out that due to the legal development and / or official or court decisions, also with regard to the existing legal framework, the Mondo Community Coin may be subject to regulation or legal restrictions or a partial or complete prohibition, in general or for the case if the regulatory requirements are not met, this applies, for example with regard to the sale, acquisition, administration, trading or redemption, which can lead to a restricted usability of the Mondo Community Coin or to its complete worthlessness.

Unlike tokens, insofar as they qualify as an investment fund, security or asset, the Mondo Community Coin as a utility token is not subject to any special legal regulation according to which a prospectus (sales prospectus or securities prospectus) must be created for its issue and before its publication by the Federal Financial Supervisory Authority (BaFin) would have to be approved. The documents accompanying the issuance of the Mondo Community Coin, including this risk of information and the white paper on the Mondo Community Coin, do not constitute a securities prospectus or sales prospectus or parts thereof to be prepared in accordance with special legal regulations and have not and will not be submitted to BaFin for approval. The buyer of Mondo Community Coins can therefore not rely on information documents that are subject to regulation or supervision by BaFin when deciding about the acquisition of Mondo Community Coins.

Returns, tradability

The Mondo Community Coin is designed exclusively as a voucher to be redeemed for services of the CBNS, which are only offered on the online marketplace <https://mondo.shopping> for holders of Mondo Community Coins. The Mondo Community Coin has no further purposes.

Apart from the possible existing possibility of revoking the purchase of Mondo Community Coins according to the requirements of the statutory rights of revocation, buyers are not granted the right to return Mondo Community Coins once they have been purchased for reimbursement of the purchase price they have paid. The CBNS does not plan to apply for admission to trading or inclusion in trading on a regulated market or any other equivalent market for the Mondo Community Coin. Even if the Mondo Community Coin can be traded on a secondary market by the purchaser, there is a risk that no purchaser can be found who is willing to purchase Mondo Community Coins against payment of the original purchase price or part thereof or even against payment of a price in euros or in another fiat currency. In this respect, there is a risk for a purchaser of Mondo Community Coins that he no longer receives or only partially receives the purchase price paid for Mondo Community Coins.

On the other hand, it cannot be ruled out that, for whatever reason, intensive trading in Mondo Community Coins, f.e. on so-called crypto exchanges, may develop, so that the Mondo Community Coin no longer has the exclusively intended character of a mere voucher, which can have the consequence that the supervisory authorities no longer recognize it as a mere voucher and the Mondo Community Coin can be subject to regulation with the consequences described above.

Property and administrative rights

The Mondo Community Coin can only be used as a voucher token (utility token) to redeem services of the CBNS on the online marketplace <https://mondo.shopping>. The Mondo Community Coin does not grant any property or administrative rights with regard to the CBNS, i.e. in particular it does not grant any claims to profit or loss sharing, to participate in the development of assets, to exercise voting rights, to participate in shareholders' meetings or to participate in the management the CBNS.
